Dear Tirtha,

Please find the left panel for all the users.

1. **School Admin** - You need to help in doing it , as there are a lot of functionalities Admin will control and Menu needs to be thought through as per the workflow , which your team can suggest.

2. I have created users - like **Principal , Trustee , Council - District , Ministry** . I had kept all Left panels the same for everyone in leadership positions . Only Data shown will have to aggregate one as per hierarchy and further drill down to the lowest level will be possible. Home screen should have a Map View of the UK and Schools should be pointed.

Creation of these users helps us to make the product more attractive and we can target - Councils /Districts to sell (which controls around 200-300 schools) ; also we can go to the ministry and give a demo or politicians.

3. Left panel for General **employee users** - as School admin staff has not been created. If the School Admin Menu is fixed , then it will be a subset of it as per profile of employee. conditional access will be given by School Admin , what can be seen and what not.

Let's complete the Left Panel tomorrow. Few sub menus may be required to be together otherwise when conditional access is given, it will not show the required screens. Please correct that as per Data structure /modules.

We have to start the front end development of the missing UI design and the corrections urgently. The front end developer needs to come in on call with Nikita (designer) who created the design. Me and you need to be there , as we have to approve the final design as per the workflow. It will take time. I suggest we complete it over Thursday & Friday.

Front end developers will take at least 2 weeks to develop. We are running short of time.

Thanks & Regards,
PK
